

Plant Manager

DESCRIPTION

WHIBCO of New Jersey is recruiting a full-time Plant Manager for its Port Elizabeth Plant. The Port Elizabeth Plant produces construction aggregates and industrial (dried) sand.

The principal materials produced at the construction aggregate plants are blended aggregates, concrete sand and gravel. The sand and gravel plants have capacity in excess of 1 million TPY.

The industrial sand plant produces dried sands that are principally used by the roofing, grout and foundry industries.

The Plant Manager must be a problem solver that can turn around difficult situations. He / She is responsible for the direction and coordination of all production operations in New Jersey to produce products of high quality and reliability at an optimum cost, and in accordance with customer shipping schedules. Operations include packaging, testing, shipping, reconditioning and salvage.

We offer a competitive compensation package.

REQUIREMENTS

- Bachelor's degree in Business, Mining or related discipline or equivalent experience preferred
- Minimum of 10 years' experience in the aggregates or construction industry, or related industry experience required
- Excellent planning, administrative and communication skills
- Electrical, Industrial Electronics, and/or Mechanical Engineering degree preferred
